Inflation-Fighting HOME DECORATING IDEAS

Get What You Need!

Giving your home the right decorating touch, without having to put a big touch on your bank account, is often a matter of mind over money.

Many people would be amazed at how far a moderate amount can go when it's accompanied by a little ingenuity and a lot of knowledge of just what is needed.

If, for example, you'd like to have a headboard, you don't have to buy one. You can use your head and create a chic set of stripes backing up the bed from old strips of wallpaper. If you'd like something more solid, simply attach a bedspread to a piece of plywood and set it up behind the bed.

You have to use your head (as well as your feet) when you shop for carpets to get the right floor for your family and for the function of the room. One help is the Mark of Performance classification system one major carpet company has developed to describe the durability of its carpets. There are five categories: Category I indicates that the Bigelow carpet is suitable for light traffic areas, such as guest rooms or some dining rooms. Carpets labeled II are for medium traffic areas: bedrooms, some living rooms. Number III carpets are for general use in living rooms, some halls, some bedrooms; IV indicates

SAVING MONEY CAN BE SIMPLER when you've got some smarts, some style and some help.

heavy use in young children's rooms, playrooms, family rooms, halls or stairs, and V indicates commercial use, though many families have it in mud rooms, front halls, play rooms and children's rooms.

You can revive rather than replace an old table with a floor length circle of felt trimmed with fringe and topped with a slab of simulated marble cut to fit the top of the table. You'll save the table and save yourself some money too.

From Charity To Social Equality . . How Close?

From a meager beginning in 1900 a handful of civic-minded men in Marion, Virginia formed what is today an organization numbering in the thousands.

The Virginia Council on Social Welfare's first conference included discussions of problems of human need resulting in an exploration and fact-finding mission.

A common thread throughout the organization's seventy-eight year existence has been a timely investigation of social problems and social needs. A feature of the organization that was officially established in 1930 was the institutes and workshops designed to develop the knowledge and skills of those responsible for solving human problems while meeting human needs.

Doctors, nurses, lawyers, clerical workers, social workers, social work aides, psychologists, teachers, and volunteers who are involved in the areas of mental health, welfare, public health, medicine, mental retardation, education and corrections comprise the present day organization.

Mental illness, delinquency, the aged, the indigent, the substance abuser, affect us all. Active members of Virginia Council on Social Welare, be they professional, support staff, or volunteer, play a significant role in dealing with human problems.

Each year VCSW conferences are held. These conferences are opened to anyone interested in his/her fellow human beings. The 1978-79 schedule is as follows:

FROM CHARITY TO SOCIAL EQUALITY?

In a sense, we have not left charity on the way to social equality - - - for the simple reason that charity is equated to compassion, and there can be no social equality when compassion is absent. In recent years one fact has stood apart from all others . . .

People can make the difference. Won't you join us?

U. S. Surgeon General Says "No Safe Level of Smoking"

Surgeon General Says "No Safe Level of Smoking"

In answering the findings of a study made by Dr. Gio Gori, head of smoking and health program at the National Institute of Health, U. S. Surgeon General Dr. Julius B. Richmond says there is no known safe level of smoking any cigarette of any type. Dr. Gori's findings have been widely publicized and his statements concerning no apparent risk in smoking certain numbers of 27 "low tar" brands of cigarettes have been challenged by physicians, including members of the Virginia Lung Association's medical section, the Virginia Thoracic Society.

Dr. Richmond went on to say, "While some cigarettes are less hazardous than others, there is no data anywhere in the large body of scientific evidence on the dangers of smoking that holds out any hope that there is such a thing as a safe cigarette or a safe level of smoking. . . A key fact must be borne by all: Every smoker faces a risk of death or disability that is greater than that faced by those who don't smoke."

Two other nationally known doctors have rejected by Dr. Gori's belief that less hazardous cigarettes may be considered "tolerable" or safe. Dr. Arthur C. Upton, director of the National Cancer Institute, and Dr. Robert I. Levy, director of the National Heart, Lung, and Blood Institute, have reviewed the paper written by Dr. Gori on low tar and nicotine cigarettes. "We believe," they said in a joint statement, "that Dr. Gori's conclusions on low tar and nicotine cigarettes are on assumptions that have not been proved at the present time. . .Many other substances in cigarette smoke may contribute to the damaging effects of smoking in addition to the tar and nicotine content.

"To conclude," they said, "that the risk of smoking cigarettes declines in direct proportion to the extent that tar and nicotine is removed from the smoke is at best premature -- and may be wrong -- on the basis of current scientific knowledge. We therefore fear that Dr. Gori's paper may mislead the public."

Here in Virginia, Dr. Richardson Grinnan, pulmonary specialist at St. Luke's Hospital and member of the Board of Directors of the Virginia Lung Association and the Virginia Thoracic Society, stated after studying Dr. Gori's paper, "To imply that smoking cigarettes, even low tar cigarettes, is not detrimental to respiratory health is a direct contradiction to all the findings of scientific study since the early 1960s.

"As a physician who sees daily the effects of cigarette smoke on the lungs, I am distressed at any statement that encourages the cigarette habit."

Also, members of the Virginia Interagency Task Force on Smoking and Health, composed of representatives of the American Cancer Society, Virginia Division; the American Heart Association, Virginia Affiliate; the Virginia Lung Association; the Virginia Health Department; and the Virginia Department of Education, have reviewed Dr. Gori's findings, and have concluded that previous research indicates that there is a risk in cigarette smoking, even in "low tar" cigarettes.
